TARDIS

Ideal for Boardroom tables, conference tables, office desk and wherever a classical, stylish, contemporary but practical cable management solution is required.

The TARDIS series in desk box lids opening edge has a soft bristle insert that fits snugly around the cables allowing the lids to sit tight and flush. A unique feature of these lids are the cable guides attached to either end. The function is to push the cables towards the centre when the lids are closed, thereby avoiding damage to the cables caused by the scissor action of lid closing.

TARDIS is also available with an integrated power and data solution.

Cutout Size

The POWERED GROMMET is an adaptation of the 128mm floor grommet, providing an effective means of power and data provision at floor level. Particularly suitable to provide power for cleaning equipment.

ports & grommets

CABLE OUTLETS provide a simple and convenient method of passing cables through desk tops and work areas.

The Circular Cable Port is designed for minimum installation effort and to blend with the desk design. Neatly enhancing cable exit points. The two piece removable lid allows maximum access to pass plugs through the cutout, but can be replaced with only a discreet slot for the cables to exit during use.

Standard colours are black, or grey, other colours available subject to minimum quantity

The FLOOR GROMMET is a simple but effective circular floor port allowing access to under floor cables and sockets. Easily installed in most types of raised floors and designed to withstand normal office loadings.

Two standard sizes (96mm, 180mm) suit various applications with standard colours being black or grey. Other colours or materials are also possible, please contact OE Electrics for more information.
